They’re Lying About Polio: Just Stop with the Vaccinations, Already

by Noel Joshua Hadley
“And the woman beheld Sammael, the angel of death, and was afraid; yet she knew that the tree was good to eat, and that it was medicine for the enlightenment of the eyes, and desirable tree by means of which to understand. And she took of its fruit and did eat; and she gave to her husband with her, and he did eat.”

Genesis 3:6 [Targum]
FRANKLIN DELANO Roosevelt was stricken with polio, and I don’t believe a word of it. Yes, that is precisely what I am saying. A United States President faked it. If you believe that is unbecoming of our Commander in Chief, and therefore unimaginable, then perhaps we need to go all the way back to the dawn of human history and begin undressing the deception from there. The serpent lied. That will be on the test.

Presently, we are told that a paralytic illness left Roosevelt paralyzed from the waist down, being diagnosed with poliomyelitis at the time, or polio for short. His diagnosis is debated today, as his symptoms are said to be more consistent with Guillain–Barré syndrome. But that is likely because GBS is the most common cause of generalized paralysis in our post-polio era, and they are attempting to milk the psyop for everything it’s worth. Keep the stew simmering on the backburner of our consciousness. We shall turn once more to Roosevelt in a moment, because the context here, and the point of this entire paper is Poliomyelitis, or polio for short. During the first half of the twentieth century, an entire generation of children were dealt a crippling blow to a virus—or so we’re told. Hence, polio. Before this is over, you shall see how and why they’ve lied to you about that too.
I decided to look polio up on The Wikipedia, and this is what I found.

**Poliomyelitis**, commonly shortened to polio, is an infectious disease caused by the poliovirus.[1] In about 0.5 percent of cases, it moves from the gut to affect the central nervous system, leading to paralysis or death. In the worst cases, the virus causes paralysis of the muscles of respiration, leading to death from respiratory paralysis and failure of the heart.[2] The disease can be transmitted from person to person through infected fecal matter entering the mouth.[1] It may also be spread by food or water containing human feces and less commonly from infected saliva.[1][3] Those who are infected may spread the disease for up to six weeks even if no symptoms are present.[1] The disease may be diagnosed by finding the virus in the feces or detecting antibodies against it in the blood.[1] The disease occurs naturally only in humans.[1]

Wrong. Polio is not infectious, nor is it the cause of a virus. Because there is absolutely no connection to be had between disease and the spreading of viruses. Ridiculous. And yet, there it is. It’s in the opening sentence of their article. Wiki likes to tell you their agents’ role, or in this case, the psyop, within the introduction. It’s how they pass notes in class. Because even spooks got to eat, and they simply don’t have time to read entire articles. There are far too many deceptions for that, you know.

Poliovirus is usually spread from person to person through infected fecal matter entering the mouth.[1] It may also be spread by food or water containing human feces and less commonly from infected saliva.[1][3] Those who are infected may spread the disease for up to six weeks even if no symptoms are present.[1] The disease may be diagnosed by finding the virus in the feces or detecting antibodies against it in the blood.[1] The disease occurs naturally only in humans.[1]

And then we read garbage like this. It says poliovirus is spread from person to person through infected fecal matter entering the mouth. Wrong again. Apparently, the invasion of flying poop gripped the world in fear for a few consecutive decades but was only effective in spreading the disease from an infected host for up to 6 weeks before seeking retirement. Why only six and not five or seven, and why even stop there? It’s a virus. A virus isn’t even a living thing to begin with. A dead non-living invisible thing cannot reproduce. Likewise, it cannot decide to invade a host one week but then retire the next. That’s not how any of this works.
Look how Britannica defines a virus. Though they manage to get the first half wrong, the second half is correct. Indeed, *virus* is a Latin word which means “slimy liquid” or “poison.” This practically has *vaccines* written all over it. How very Orwellian of them, to show us the truth in plain sight and then lie about it. Understand, germs are not poison and furthermore, they are not a disease. It is only when the host becomes damaged that the germs begin to manifest as a symptom. Detoxing is a good thing. Best to flesh out the disease. Bodies are amazing. But again, germs are not the cause of the disease. Unhealthy living is. Yes, poop is disgusting, but viral poop isn’t a thing. The people infected with polio, mostly children, were being poisoned.

The official narrative is a juggling act. They have no choice but to keep the charade going, or else expose everything. Perhaps there is a way to pull the cloth out from the table and keep the piping hot bowls of beanie-weenie in place. I’ve seen it done on television. But I’m incapable of doing it. I’m simply not that talented. I’d much prefer pulling the cloth and everything upon it. Better yet, I’ll just remove a leg and watch the entire table fall. *Why* delay? Let’s make it happen. The Establishment has prepared another table before us, and everything on the menu is an unclean animal. Are you ready? I am. You are too? *Good.* Then here we go.

Paralysis: A Brief History of the Ancient World

PRIOR to being named polio, conditions that involved the crippling of the limbs were referred to by various names, such as palsy or apoplexy, as well as paralysis. Palsy however refers to a sudden weakness of muscles on one half of the face, often resulting from a stroke, and is accompanied by involuntary tremors. Isolated cases of infantile paralysis, however, have been documented for centuries, dating all the way back to the papyrus of ancient Egypt and Hippocrates, a fourth century BC Greek physician. Here’s the thing. Long before Pasteur’s germ theory hoax, the ancients understood full-well that paralysis resulted from exposures to poisonous substances. For example, the hemlock plant contains poison alkaloids. If ingested, conium will cause paralysis of various bodily functions. Though the victim will be unable to move, he will potentially remain aware of all that is transpiring around him until paralysis of the respiratory system finishes him off.

I am once more reminded of the Socrates death hoax, in which we are expected to believe the philosopher from Athens, selected to bring the Mysteries out into the open, was sentenced to die by ingestion of hemlock when in fact his student Plato continued, building the very foundations of Greek Hellenization unabated, whereas everybody became an immortal
soul, thereby initiating nearly everybody into the Mystery religion without consequence. *Ridiculous.* The death of Socrates is fake news. Globe earth, introduced to everybody from Socrates’ deathbed, *wink-wink*, is fake too. While the rest of the flat, motionless world passed around the hemlock, straining their eyes in hopes of finding the curve just beyond the horizon, agent Socrates was probably kicking back with the cyclops on the island of Sardinia, sipping sangria from a coconut.

Fast forward to the 18th-century and doctors in Deutschland began frequently finding that patients, often chemists or miners, were rendered paralytic by exposing themselves to quicksilver. The connection shouldn’t surprise anyone, as quicksilver is widely regarded as one of the most toxic substances on earth. Quicksilver, a heavy, silvery-white liquid metal, is the alternative name for Mercury, number 80 on the periodic table, and is used in the extraction of precious metals, such as gold and silver. It is rarely discovered in its pure metallic and naturally occurring form, but usually occurs in something called mercury sulfide, a chemical compound composed of mercury and sulfur. The most common source ore for refining elemental mercury is a bright scarlet to red-brick pigmented vein-filling mineral known as cinnabar. Case in point. After
many years of slaving away in the mines, cinnabar mine workers often suffer from crippling neurological and mental disorders. *See,* we’re already getting somewhere.

In 1824, doctors in England found poisons in certain mineral substances, such as quicksilver, arsenic, and lead, either resulting from their fumes or the administering of a solution, to be a leading cause of paralysis. The sick sadistic psychopaths who rule our world just love to shove these truths in our face and then gaslight anyone for daring to disbelieve their preferred alternative. Understand what they’re ultimately saying here. While it may be true that many of the patients referred to by both English and German doctors were mainly exposed to poisons within their working environment; toxic substances, such as mercury and arsenic, were also used as medicines during the same two centuries. The Greeks had earlier used mercury for ointment—the Egyptians for cosmetics. In the 14th century, it was employed as a treatment for leprosy. And in the 16th century, for syphilis. Other poison substances described by doctors at this time, capable of creating paralysis, were phosphorus, cyanide, and carbon monoxide.

*Fun fact.* The Establishment named a *planet* after Mercury. But you probably knew that already. Mercury is part of the Roman pantheon of divine beings. His Egyptian counterpart is Thoth. His Greek is Hermes. Among Mercury’s divine attributes, he was the elohiym of deviation,
trickery and thieves. He also serves as the guide of souls to the underworld. If you read my paper on the art of alchemy, then you will hopefully connect those dots and understand why the wandering star deemed closest to the sun would be named after the guide to the underworld. Pinocchio Is Dead. It all goes back to the Mystery religions of Babylon and Isis and involves sun worship.

Another fun fact, because we specialize in facts here at Cosmology, is that the staff of Hermes is designated as the worldwide symbol for commerce but also for medicine. Otherwise known as the Caduceus, the staff of Hermes depicts a coiled double-helix made up of twin serpents. The World Health Organization has chosen the rod of Asclepius, entwined only by a single serpent, and wielded by the Greek elohiym Asclepius as their symbol—a deity associated with healing and medicine. Meanwhile, pharmacies all over the globe prefer a serpent playing the part of the olive in the martini glass for their symbol.

Why do I get the feeling that our sick psychopathic Slave Masters have, oh, I don’t know, a thing for serpents? Do you see what I’m getting at here? We are gazing back upon the beginning. The first lie and the last. In the book of Revelation, Yohanan (John) outs BIG PHARMA as the drug sorcery which leads all nations astray. The Greek word φαρμακεία is pronounced “pharmakeia,” as in pharmaceuticals. Its architects and practitioners are cast into the Lake of Fire.
I point this stuff out to people and they tend to have the same reaction that Eve did in the garden when she saw the serpent. “Yeah, but this is different.”

Polio: A Brief History of the Modern World

THE contagious nature of polio was first “discovered” in 1907. Hopefully, you will either be struck by the hurricane force winds of my sarcastic sigh or the heavy pendulum swing of my eyes, both of which have attempted to breach your side of the computer screen. The honor of this discovery is attributed to a certain Otto Ivar Wickman. The Wikipedia introduces him, first sentence, as “a Swedish physician, who discovered in 1907 the epidemic and contagious character of poliomyelitis.” By this we can conclude that Wickman was used to roll out the idea which labeled paralysis as a contagious disease, capable of being spread from person to person. Ridiculous. But that is not all. As part of his package deal, take it or leave it, polio could now be present in people who did not appear to have a severe form of the disease, what is referred to as abortive cases.
We are dealing with an invisible enemy. It lives within us. And no surprise, The Government needs to eradicate it.

Actually—the U.S. Supreme Court had already decided in 1905, with the case of Jacobson v. Massachusetts, that the constitutionality of mandatory vaccination programs, specifically as it applied to smallpox, would be upheld. Put in slightly different terms, The Government will not recognize: “your body, your choice.”

The argument was made by Cambridge Pastor Henning Jacobson that the mandatory vaccinations which he had received in his childhood home of Sweden, as part of their mandatory vaccination programs, were both dangerous and temperamental to his health, and thereby refused participating in the mandatory American program. Jacobson furthermore said that “he and his son had had bad reactions to earlier vaccinations” as children, and that Jacobson himself “had been caused great and extreme suffering for a long period by a disease produced by vaccination.” Henning Jacobson was a first century anti-vaxer. And they made an example of him.
Wiki likes to rub the preserved poop from the 1905 line-up of Supreme Court judges in our faces: “The Court’s decision articulated the view that individual liberty is not absolute and is subject to the police power of the state.”

Our Slave Masters have regularly cited Sha’ul when dealing with these matters of State. Or as Jeff Sessions, 84th United States Attorney General, has recently stated: “I would cite you to the Apostle Paul and his clear and wise command in Romans 13, to obey the laws of the government because God has ordained them for the purpose of order.” So, there you go. Take your medicine like a good boy. And don’t forget your please and thank yous. Paul wills it. That is all.

In 1910, at the Rockefeller Institute for Medical Research in New York, Dr. Simon Flexner, a professor of experimental pathology from the University of Pennsylvania, demonstrated that “germicidal substances” were present in the blood of monkeys that had survived polio. What Flexner and fellow researcher Paul Lewis essentially did was produce paralysis by creating a concoction, which included the ground-up spinal cord from a “polio” victim, that was then injected into the
brain of a living monkey. They then extracted fluid from the infected monkey’s brain and injected that into the brain of another living monkey. In fact, any number of monkeys had Flexner’s polio injected into their brain. Every test monkey apparently experienced some form of paralysis. Why are red flags being planted upon the narrative as often as the Arizona bomb blast-holes which doubled as Neil Armstrong’s moon craters? Because we’re not even dealing with a slight of hand. Injecting toxins into the brain of a monkey or any living animal, including humans, will produce paralysis.

This isn’t rocket science, people. Come to think of it—it is. The poliovirus itself would not be visible to researchers until the 1950s, when the electron microscope was available. How was Otto Ivar Wickman and his friends capable of handcuffing polio to a virus, again? This is basically the equivalent of actor astronauts being successful at sailing past the Van Allen belt to reach the moon in the 1960’s and then speaking to President Nixon through a landline telephone on live television, even though NASA admittedly does not have the ability to surpass low earth orbit today and return. And yet, when it comes to the poliovirus, turn-of-the-century doctors were able to locate and make vaccines for it. And at any rate, the conclusion to Flexner and Lewis’ study on the brain of monkeys, as well as the research of their contemporaries, is that the world needed a mass vaccine for all of humanity which might induce antibodies as a means to fighting The Virus, but that’s probably not suspicious.

I checked. Flexner was a Joo. His father, Morris Flexner, was a migrant from Czechoslovakia. Simon Flexner’s brother Bernard Flexner was a prominent member of the Zionist Organization of America, while he himself was also a close friend and adviser to John D. Rockefeller Jr.

Mm-hmm. None of this is in any way suspicious.
Wedged between Wickman and Flexner are a couple of doctors from Vienna, Karl Landsteiner and Erwin Popper. In 1908, the pair likewise attempted to identify the poliovirus using the same research methods. The ground-up spinal cord from a “polio” victim injected into the brain of living monkeys. Unlike Flexner, they were deemed unsuccessful at it. Landsteiner is pictured above. Perhaps he is sad, having lost the paralysis war to the American monkeys, and somebody is trying to cheer him up. Like practically everything else in the dizzying spin of globe earth, I’ll let you make sense of what’s going on.

Wiki lists Landsteiner as a Joo, wink-wink.

Another doctor who worked with Landsteiner in discovering the virus was Constantin Levaditi. Levaditi had already been accepted nearly a decade earlier to work with Ilya Ilyich Mechnikov, pioneering researcher in immunology and a Joo, wink-wink, at the Pasteur Institute in Paris. Hopefully, you buy your red flags at a discount price in bulk, because we are planting them today like toothpicks in a mountain of pork weenies at a church potluck.
Now that the slave monkeys had proven their point (which is to say we should starve off any temptation for allowing our Slave Masters to inject ground up bones into our brain), the polio myth was ripe for becoming institutionalized. Its premier psycho-dramatic episode arrived in 1916, when Brooklyn found itself the center of a Newspaper worthy epidemic. More than 2,000 people reportedly died in New York City that very year, and across the United States, polio killed another 6,000, leaving thousands more paralyzed.

Pools were closed. Amusement parks were closed. The gathering places of children everywhere were closed. The globe may have even spun a little slower—who really knows? Because polio was… a virus. Apparently. And also because the grubby little hands of children are the cause of so much human woe. But not really.

The official narrative will tell you that polio infections repeatedly surfaced in the summer months, but that is not what Dr. Ralph Scobey found. In April of 1952, Scobey prepared a statement for the Select Committee to Investigate the Use of Chemicals in Food Products in the US House of Representatives. Scobey’s investigation dipped its toes into the patterns
of the how and when of polio outbreaks, and this is what he found. There was at the time dots to be connected between polio and the consumption of fresh fruit, particularly in the autumn, immediately following harvest. The time of year only makes sense, as the most probable historical cause of paralysis prior to The Vax is toxic pesticides applied to produce. In 1897 for example, Australia saw a large outbreak of polio. Phosphorus had been widely used by farmers for fertilizing that year.

Did they close the poisoned produce stands? The answer is no, they did not. Why waste a good psyop?

During the early 20th century, DDT and ice cream trucks were in neck-and-neck competition for the coveted role of America’s pastime. A DDT truck rolling down your suburban street implied you and your childhood buddies were about to have a good time. The reason they were doing it was to fight mosquitoes, because mosquitoes were claimed to have carried malaria. Dichlorodiphenyltrichloroethane, referred to by us laymen as DDT for short, is a colorless, tasteless, and almost odorless crystalline chemical compound, an organochlorine. It was first synthesized in 1874 by the Austrian chemist Othmar Zeidler. FYI, Zeidler is a Jewish name. DDT was then developed into an insecticide, particularly to limit the spread of insect diseases during The War.
That’s the CDC’s claim to fame, you know. Applying DDT to the interior of every suburban neighborhood in America during the 1940’s and 1950’s, thereby poisoning millions of children. The upside is that they ended malaria. *Wink-wink.* Apparently, mosquitoes with malaria are too afraid of Dr. Fauci and the CDC to illegally run over the border again, because of their DDT arsenal. It’s why they won’t come back. *Right.* It truly is difficult writing this stuff and avoiding sarcasm. Believe me, I’m trying. And anyways, don’t take my word for it. Look it up for yourself. The CDC claims to have eradicated malaria within America. Meanwhile, I am expected to believe only third world countries carry malaria for lack of DDT in their suburban neighborhoods. Ridiculous. Another hoax for another time. But they are still desperately clinging to their narrative, hoping you don’t ask any questions.

The man who made the insecticide “discovery” is Swiss-American chemist Paul Hermann Müller. By October 1945, DDT was available for public sale in the United States, promoted by The Government for use as an agricultural and household pesticide. DDT was advertised as something good for you. “Look, kids! The DDT truck has arrived! Go run and play in its fog machine!” Was DDT highly toxic? Why *yes,* it was. And no surprise, in 1948, Muller won the *Nobel prize* in Physiology or
Medicine for his 1939 discovery of insecticidal qualities and use of DMT, something humanity could celebrate. I checked. Mueller was a **Joo**. Over the following two decades, DDT was sold right alongside the baby powder. **Disgusting.** Who would have thought something capable of
assassinating insects would be poisonous for babies too? And why would the CDC lie about something like that?

1921 is the big year. That is the occasion when polio struck Franklin Delano Roosevelt, leaving him paralyzed from the waist down. It happened while vacationing on Campobello Island in August, the year after his failed attempt at running for vice-president alongside Governor James M. Cox of Ohio, defeated by Republicans Warren H. Harding and Calvin Coolidge. The future president fell ill. His main symptoms were fever; bowel and bladder dysfunction; numbness; hyperesthesia; symmetric, ascending paralysis; facial paralysis; and a descending pattern of recovery. For the remainder of his life, Roosevelt was left to his wheelchair and the use of braces and canes, which gave the illusion that he was capable of walking.

You’re probably wondering why I’ve concluded that Roosevelt faked it. Simple. Because Roosevelt is a blue blood through and through. We are dealing with the children of Cain. Let’s consider the following.
Roosevelt is directly related to **5 Mayflower passengers**. Isaac Allerton, John Howland, and Richard Warren are all **sixth great-grandfathers**. Degory Priest is a **seventh great-grandfather**, with Francis Cooke being an **8th-great**. My serial reader will hopefully note that I have no reason to believe the Plymouth Rock narrative happened at all. Though it may or may not be a myth, the **names** are important. The Mayflower “passengers” might as well have been kings. Maybe they were. Maybe they were **more** than kings. And for whatever reason, the lineages of our presidents all seem to funnel through them.

And speaking of blue-blooded royalty, Roosevelt is directly related to several kings, as we would expect of any U.S. President. King Edward I is an **18th-great**. King Henry III is a **19th-great**. King Louis VI is a **23rd-great**. William the Conqueror is a **24th-great**. King Robert I is a **29th-great**. Alfred the Great is a **32nd-great**. Charlemagne is a **33rd-great**.

He also has **12** signers of the **Magna Carta** in his family. Hugh le Bigod, John d Lacy, Gilbert de Clare, Robert Fitz Walter, and Saher de Quincy are all **20th great-grandfathers**. **21st great-grandfathers** include William d’Aubeny, Richard de Clare, Robert de Ros, Roger le Bigod, and Henry de Bohun. As for **22nd great-grandfathers**, John Fitz Robert and William de Huntingfield. I’m beginning to believe that the **Magna Carta** signers weren’t even human. Did they touch down at one time upon Mount Hermon? Who **the hell** really knows?

The point I am trying to make here is **two-fold**. Roosevelt is a **blue blood** and therefore a **god** on earth. Secondly, do you think they would have **offered** a member of their pantheon the coveted poisoned hemlock? The answer is **yes**, they would. But only in hieroglyphic storytelling. If anything, Roosevelt would **produce** the sort of paralysis which might thrust the entire narrative forward. Kind of like Socrates and that cup of hemlock they’re still passing around. I have **just** given the ending away. In a little while, you shall have to act surprised.

The **same** sick psychopaths who run our world and convince us we’re currently spinning at 1,000 miles per hour on the titled axis of a molten lava space egg while simultaneously hurdling another 67,000 miles per hour around a nuclear reactor in an ever-expanding kabbalah
vacuum love to shove the truth in our face and then mock us for believing it. Gaslighting is a classic Intel technique. For the record, mach speeds begin at 761 miles per hour. I’ll let you do the math as to what mach we’re reportedly traveling at. Ridiculous.

FDR was elected president in 1932. So, it should come as no surprise to learn that the first polio vaccine trials, two of them, unraveled under his watch. If you tell me that The Vax was not passed around until a decade after Roosevelt’s death, then I will remind you that man did not land on the moon until nearly a decade after Kennedy. In his 1944 radio-broadcast appeal for more money to the National Foundation for Infantile Paralysis, Roosevelt likened the fight against polio to the Second World War. Interesting, since Nixon made the same comparison with cancer.

Here Roosevelt quipped: “The dread disease that we battle at home, like the enemy we oppose abroad, shows no concern, no pity for the young.” Oh please. “It strikes— with its most frequent and devastating force— against children. And that is why much of the future strength of America depends upon the success that we achieve in combating this disease.”

And now for an added dosage of irony. In 1935, Maurice Brodie prepared a killed polio-virus concoction, testing chimpanzees rather than monkeys, next on himself, and then on children. Some 11,000 individuals (mostly children I presume) were tested. Also, his mother was a Ginsburg, and his body was interred in a Jewish cemetery.

Meanwhile, John Kolmer of Temple University in Philadelphia developed his own polio-virus vaccine, which he tested on about 10,000 lab-rats. Scratch that. Children. He experimented on children. Mostly the children offered to Science by their doctor parents. The test proved a disaster. Five children died. Ten more were paralyzed. Countless others were hurt. All were victimized. Here Wiki writes: “The response from other researchers was uncharacteristically blunt; one of them directly called Kolmer a murderer.” Emphasis is my own. Hopefully, you will see what they’re doing here. The Establishment loves to show everyone the Truth, kind of like a Tartarian world fair, and then mock those of us who refuse to pass our seed through the flames for Moloch. In other news,
Kolmer likely received the criticism that he did because he’s the one guy in the entire line-up that doesn’t appear to be a Jew. Don’t shoot the messenger.

Do you remember that scene from the Michael Bay and Jerry Bruckheimer production ‘Pearl Harbor’? The movie was released in the months leading up to the September 11 attack, and at the time, was advertised as the last hurrah for the dying War generation. Bruckheimer is the son of German Jewish immigrants. And in case you were wondering, Bay is also Jewish. Probably just a coincidence. In the movie, Roosevelt is played by actor Jon Voight, which is appropriate considering how Voight is related to all of the same people, including Roosevelt. Are you not entertained?

In the scene that I’m thinking of, Roosevelt is discussing the bombing of Pearl Harbor with his militarily advisers, and he tells them:

“Gentlemen, most of you did not know me when I had the use of my legs. I was strong and proud and arrogant. Now I wonder every hour of my life why God put me into this chair. But when I see defeat in the eyes of my countrymen; in your eyes right now; I start to think that
maybe he brought me down for times like these when we all need to be reminded who we truly are.”

The speech goes on from there, but the point is that Roosevelt is asking something of his military which cannot be done. Mainly, the bombing of Tokyo. The man who is paralyzed from the waist down therefore stands up to prove the impossible.

I should probably pause here and explain that I only began looking into polio, the very paper which sits now in your lap, because Skynet sent me an article which celebrated recently discovered footage of Roosevelt doing just that. He was proving the impossible and walking.

“Oh, Noel, shame on you! Leave the polio cripple alone!” You tell me. “He’s painstakingly using leg braces and a cane!”

The footage comes to us by way of a certain Fred Hill of New York, and his camerawork plays off like something akin to the Patterson-Gimlin film. We are treated to choppy footage of the seashore, presumably Fred Hill’s family vacation. Next a fishing vessel. Then a young boy, perhaps his son, holding up the days catch. Footage quickly cuts to Washington D.C., as testified by the phallus erected skyward. The camera cuts to and fro, almost aimlessly, blurring random faces on the White House lawn, as if Fred Hill from New York is seeking something. The date, we are told, is
April 22, 1935. Fred Hill of New York then steadies his camera upon the South Portico. President Roosevelt emerges from the White House and walks across the balcony before stopping at the railway to wave at the crowd. *Catch of the decade.*

Geoffrey C. Ward, a Roosevelt biographer and trustee of the FDR Museum and Library, explains that “only a handful of mostly private snapshots and a few feet of blurry amateur film have been found to show Roosevelt walking.” Some 51,391 people were recorded entering the White House gates that day. According to Ward, “the Secret Service agents probably didn’t see Hill filming during the Easter Egg Roll because of the unusually large size of the crowd on the White House lawn. If they had, they would likely have taken the camera and confiscated the film before giving it back to him.”

Remember how 33-degree Freemason, CIA spook and Joo Abraham Zapruder filmed the Kennedy assassination, and nobody cared to confiscate his footage? These are the things that keep me up at night. Why was Roosevelt walking a matter of national defense?
By the way, his wife Eleanor Roosevelt was related to 12 signers of the Magna Carta. Do you think she’d let her husband sip from the milk bottle? I think not. Fun fact. Eleanor is 4th cousins with Lee Harvey Oswald. Mm-hmm, Oswald is directly related to 10 signers of the Magna Carta. Same kings too. Marilyn Monroe is a kissing cousin. They’re all blue blooded. And the family of Cain never poisons its own. That is, unless they’re divulging secrets. Though in the case of Socrates, the philosopher was chosen to divulge. The poisoning was a metaphor for something else entirely.

WE ARRIVE now to the decade you were waiting for. The Fifties. With polio, the person finally chosen to pass around the poisoned hemlock is Dr. Jonas Salk. What, don’t recognize the name? Then you probably weren’t born until a later generation. There’s a vaccine named after him. The Internet will produce various pictures of Jonas Salk, and it’s all propaganda. Here we have one now. Look. There is a picture of Dr. Jonas Salk, staring into the face of the disease. Filling vials. Getting stuff done. In the years leading up to The Vax, the Media made Salk into a household name. There’s a reason for that. Salk emerged from the National Foundation for Infantile Paralysis; the very organization established by Roosevelt.
Salk was selected. I’m sure being born in New York City to Ashkenazi Jews had nothing to do with it.

This photo was taken two years before The Vax was made readily available to everyone, and what is Salk doing? He is injecting his family. Two years, mind you. Sure. After all those unsuccessful attempts on the monkey, might as well borrow your children for an hour. I am furthermore told this was a highly publicized Media event. Of course, it was. This was no doubt done in order that newspaper guzzlers, wringing their emotions out and hinging upon every plot point of the unfolding drama, might salivate for the elixir of life. He probably injected his wife and sons with dish soap. Another fun fact is that the tree of life, according to Kabbalah, contains “the way of the serpent.” It’s an esoteric decryption. The serpent gives life.
And then we have photographs such as these. There is so much going on, but only to the trained eye. Where to even begin? For starters, Salk is reading from LIFE Magazine. Spook literature. I decided to look up the issue and give it a good read, for research purposes. Its date is January 10, 1955, and contains an article whereas Howard Hughes gives a premier of his latest movie underwater. Yes, you heard me right. If you’re incapable of imagining what an underwater movie premiere might look like, and I don’t blame you, it involves scuba gear. Madness.

We then see Jonas Salk posing artificially with his family. Hanging around the house in their Sunday best, flying a kite which reads: “Atomic Rocket.” Sigh. They can’t stop rubbing the hoaxes in our faces, can they? The indoctrination runs deep.

Well, after the Media suggested that a polio vaccine was nearly ready for widespread use and then furthermore teasing everyone with Salk’s inoculated family, Jonas Salk then went on the radio, insisting: “Although progress has been more rapid than we had any right to expect, there will be no vaccine available for widespread use for the next polio season.” Jonas Salk, deflating everyone’s hopes like a good Controller.
AND now we come to the part where I show you photo after photo of sick and sadistic child abusers. A child is given little alternative but to trust their parent who hands them over to the arms of The Government, telling them that everything will be okay. The liars. Children have reason to fear. If I recall, the ending to Little Red Riding Hood had the Big Bad Wolf eating grandmother and then convincing the girl to lean in closer. Perhaps that’s why doctors and nurses wear white lab coats. Wolves in sheep’s clothing, every one of them. If a “health official” tried that on me, I’d jab him with several of them.

Why do I get the feeling that these two children were coerced into trading their souls for a stick of candy Caine? Just look at all those empty vaccination bottles filling up the pet store window, undoubtedly for all the undecided and last-minute window shoppers. The indoctrination is blatantly obvious. But even more telling is the sign insisting that parents dismiss any doubts, consult their physician, and inquire inside. That tells us there were anti-vaxxers walking the streets, trying to live their lives while circumnavigating the lie. In fact, lots of them. That’s a good thing.
The official narrative was either not set up that way to tell us about them at the time or they have since been erased from Illuminati literature. I don’t know, as I wasn’t there. All I have is Wikipedia articles and pictures such as this one for informants. But seeing as how the number of vaccinated in NYC is shown, 190,861 at the moment, and that the people peddling that poison wanted to “MAKE IT GROW…” we can easily deduce how very little has changed. The peer pressure was on then, just as push for compliance is by our Controllers now. But receiving The Vax of the Beast has only and always been a personal choice.

When all else fails, best to send in the pied piper. Lure the children with music. Elvis Presley set an example for children everywhere by pausing the hip shaking just long enough to receive his very own Polio vaccination. I would tell you this is fake and that they only offered him dish soap, but Elvis was an MK-Ultra slave who’d already sold his soul to the devil. I seem to recall that he also joined the army to set an example for the children.
Speaking of which, 666. And there it is. Saluting his Master and dressed for the part. Seriously, I didn’t think it would be this easy. I just now sought out a picture of Presley in his Military garb and this is what the Intel-net fed me. Because the world would be a much better place if everybody thought about the children, you know.

And why am I not surprised to find queen of the MK-Ultra bunnies getting hauled out for the races? Our Controllers were sparing no expense this time around. Wearing all white too to act the part of the lamb. The
poster tells us to play safe by getting our polio shots now. I suppose if anyone knew how to play it safe, it was Marilyn Monroe. It’s so nice seeing all these Elite puppets doing their part for the campaign.

Like I was saying earlier, I wasn’t there. Sometimes all I have are photographs such as this one to inform my worldview. We are expected to conclude a nurse is showing a polio victim the Good News, or the Gospel according to Salk. The headline reads: VACCINE ‘TRIUMPH’ ENDS POLIO THREAT. But for all I know, he is being held against his will and his captor is threatening him with what he is about to be injected with—if he doesn’t talk. And if I’m not mistaken, she’s technically pointing to the subheading, which reads: Plaster Face Identifies Slain Woman’s Skeleton. Well, that’s only slightly unnerving.
Obviously, poisoning the nationwide food supply simply wasn’t enough. Too few children getting crippled. DDT had its time. Eventually that campaign of evil was put an end to, but not really. I’m getting slightly ahead of myself. However, have you noticed they’re spraying the skies now too? If not, then you may want to look up and remember the shape of the clouds as they used to be.

If you’ve ever asked yourself why Satan would want so many children dead, then the answer to the “seed passed through the flames” equation is quite simple. The deed is done for the exact same reason why the ruling Establishment want people handicapped and infertile. Population control. It’s all a numbers game. Every person prematurely buried under the grass or deemed infertile simultaneously erases the generations of souls who were otherwise expected of them.

Case in point, understanding the beginning. When Yahuah asked of Cain concerning “thy brother’s blood,” he spoke in plural, referring to the
many expected descendants of Abel who would never be born, as though any number of abortions had been committed in the taking of his life.

It’s all a numbers game.

In 1954, Salk tested his polio vaccine on a million American schoolchildren. That following year, “the inactivated polio-virus vaccine,” or IPV for short, became readily available for everyone. Also, it is The Vaccine which began to produce cases of paralysis. The Vax created polio.

In 1972, DDT was banned in the U.S. This is largely due to the 1962 publication of Rachel Carson’s book, ‘Silent Spring,’ which detailed the environmental impacts that correlated with widespread use of DDT in agriculture in the United States. Jimmy Carter eventually awarded Carson the Presidential Medal of Freedom in 1980. See how The Government plays both sides? Jonas Salk received the same medal in 1977. Mm-hmm. Meanwhile, the Establishment and The Government has ignored all observations between neurotoxins and paralysis and has instead pushed the agenda that polio is the causation of a virus. Ridiculous. DDT was largely replaced by parathion, an oranophosphate. Still toxic. Parathion is used in nerve agents on the basis that it is known to disrupt processes within the nervous system. It’s a proven neurotoxin.

Before the 1970’s came to an end, Salk and a number of other scientists admitted that the mass vaccination program against polio had actually been the case of most polio cases. Paralysis occurs due to poison. And it was poison which the children were receiving. Try not to let cognitive dissonance win the day.

Have you ever taken the time to read the ingredients in a vaccine? Thimerosal is a mercury-based compound. The official explanation is that thimerosal “has been widely used since the 1930’s as a preservative
in a number of biological and drug products, including many vaccines, to help prevent potentially life-threatening contamination with harmful microbes.” The Establishment will gaslight anyone for believing polio or autism is resulted from the mercury content in vaccines and yet, mercury has been quietly eliminated from most vaccines administered to babies and small children, despite its persistent use in flu shots.

The World Health Organization claims that health problems only arise in methylmercury, whereas the ethyl-mercury in their vaccines poses no risk. Fact of the matter is, mercury remains a constant of most, if not all vaccines, including those advertised as mercury-free. No matter how you strain or filter it, mercury is a highly toxic element by which there is no known type or safe level of exposure.

The World Health Organization is a joke.
